4. The proposal becomes even more ludicrous when the operational security for very sensitive programs is considered where knowledge of the sponsor of the program is either severly limited or not even acknowledged. Special access programs would always be exempt from any such inquiry.	25X1
5. Industry is being properly represented in the councils of government. SASA's proposal is superfluous at best and dangerous at worst. It is our recommendation that SASA be told that the United States Government will not entertain its	
proposal.	25X1
